The Atmospheric Science Data Center (ASDC) is located at NASA Langley Research Center in the Science Directorate. The Science Directorate’s Climate Science Branch, Atmospheric Composition Branch, and Chemistry and Dynamics Branch work with the ASDC to study changes in the Earth and its atmosphere. Data products translate those findings into meaningful knowledge that inspires action by scientists, educators, decision makers, and the public.

The ASDC supports the MEaSUREs projects by providing a vehicle for ingest, archive, and distribution for the projects. The ASDC engages with its partners over the past two decades, were created.

The ADAM project was completed. The ADAM project was migrated to the ASDC as a pilot system. ADAM is the basis for the development activity.
