Folks,

This is a heads up email for now.

I've reviewed the pyCMR software this morning and as expected, I do not see any export issues.

However, we will have to wait for the official paperwork to process and my official sign off on that paperwork before we may open it up.

I have not yet received anything from Technology Transfer office with regards to the NTR.

Paul

Now I immediately get the dialog boxes for login. BUT, unless you have restricted to specific users of the system, it appears that anyone with a login account may still access the repository. Is that true?

Not trying to be a pain, but just want to make sure that we are not exporting the code until it has gone through the process.

Can you try now? I made the repository private.

Just tried from AT&T cell phone and can access the software. So, it is open.

Will have to remove the repository for now until we have cleared it through export control.

I think internal to NASA – Manil can you confirm?
thanks!

Is this an open REPO, or restricted to internal NASA network space? If open, software should probably not be sitting on there until we have the clearance paperwork established.

Subject: Export Control Review of Software pyCMR

Hi Paul,

I am the project coordinator for the DSIG team affiliated with UAH and NASA under Rahul Ramachandran. We submitted the OSS NTR paperwork this morning for our pyCMR software. Could you please review the code for any export restrictions?

<https://git.earthdata.nasa.gov/projects/HDS/repos/cmr/>

Please let me know if you require any more information from me.

Thank you!

Kala Burson Golden
