

# Atmospheric pic of contrails and clouds

Posted on the behalf of a user:

Specify subject Atmospheric pic of contrails and clouds

Message: Any Interest in occasional contrail pics on top of lookout mountain near Little River Canyon, Fort Payne Alabama?

=====  
Thank you for contacting us about pictures of contrails and clouds.

We do have a site here at NASA's Langley Research Center, which welcomes photos and other cloud observations.

It is a site that is set up for both schools and Citizen Scientists, called S'COOL. Here's a link to the Citizen Scientist (rover) page:  
<http://scool.larc.nasa.gov/rover.html>.

Please take a look and register to contribute, if you wish.

If you have any questions, please contact us again at any time.  
=====

Just looking for piece of mind, are we testing new jet fuels, working on climate modifications to help cool us down. Prior to here, lived in Ohio near Columbus airport never seen anything like these contrails . Any info or website would be appreciated.

NASA's Atmospheric Science Data Center (ASDC) archives and distributes data relating to radiation budget, clouds, aerosols, and tropospheric chemistry. Your question is beyond the typical scope of this Data Center.

However, NASA does have a Contrail Education Project:  
<http://science-edu.larc.nasa.gov/contrail-edu/> .

Also, here at the Langley Research Center, we have a NASA Langley Contrail Page:  
<http://www-pm.larc.nasa.gov/newcontrail.html> .

We suggest that you take a look at these pages for more information than we have to offer.

As always, if you have any questions, please contact us.
