ArcGIS: Getting Started with ArcGIS

Note: This content was developed by the ASDC User Services Team for ASDC users

ArcGIS is a robust tool allowing for geospatial visualization and analysis. This section is intended for new or returning users that have not used the program for a long period as a refresher. These tutorials will outline how to create Mosaic Datasets and visualize individual multidimensional datasets in ArcGIS for Desktop. For troubleshooting and more advanced analysis, please view the ArcGIS: Advanced Desktop-side Analysis and Troubleshooting (In Progress) set of learning modules.
