

# Copy Mosaic Dataset from Local to AWS RDS

It is faster to build mosaic dataset (MD) locally and then copy it to AWS RDS. ArcGIS Pro allows copying MD through GUI.

## Step-by-step guide

1. Connect to local folder from Catalog pane
2. Right click on local MD and select Copy.
3. Select AWS RDS connection.
4. Right click and select Paste.

See <https://pro.arcgis.com/en/pro-app/tool-reference/data-management/copy.htm> to learn copy using arcpy.
