

Update contents to main website

Step-by-step guide

1. Check out Git repository and look for `www/` directory.
2. Add or update contents.
3. Test the contents with local web browser and/or server (e.g., MAMP or IIS or Apache Web Server).
4. Commit it and upload new contents to `gisdemo.net/` bucket.
5. Wait 24 hour to clear CloudFront cache or [invalidate object](#) if you'd like to see the new change right away.

www.gisdemo.net will be redirected to `gisdemo.net`.

[Global Navigation](#) is not compatible with NASA CSS. Sign-in box will not align properly.
