

Upload service definition file using arcpy.

For some reason, MDCS can't upload service definition with credentials in JSON (mdcs-py/Parameter/Credentials/server1.json). Thus, it's better to stop MDCS at creating service definition and use another script for uploading.

Step-by-step guide

1. Create service definition file using MDCS.
2. Upload using arcpy function.

If upload.py fails with strange error message, restart the ArcGIS Server.
