

Dataset Interoperability

Summary

This section contains a series of recommendations made by NASA's Earth Science Data System Working Groups ([ESDSWG](#)) Dataset Interoperability Working Group (DIWG) that are intended to increase and enhance the interoperability of [Earth Science data](#) product files. The DIWG recommendations herein embody best practices to reduce and bridge gaps between geoscience dataset formats widely used at NASA and elsewhere and to help ensure that Earth science datasets smoothly interoperate with each other regardless of their origin.

The first document, *[Dataset Interoperability Recommendations for Earth Science](#)*, was published in July 2016 and contains 12 recommendations. The second, *[Dataset Interoperability Recommendations for Earth Science: Part 2](#)*, was published in April 2019. These are a continuation of the 2016 recommendations with the same goal of improving the interoperability of Earth Science dataset files. Most cover new areas of interoperability while some expand on the 2016 recommendations.

Section Contents

- [Dataset Interoperability Recommendations by Category](#)
- [Dataset Interoperability Recommendations for Earth Science](#)
 - [Adopt Semantically Rich Dataset Release Identifiers](#)
 - [Attach the CF flag_values or flag_masks Attributes Along With the CF flag_meanings Attribute to Each Flag Variable](#)
 - [Avoid Use of the missing_value Attribute](#)
 - [Character Set for User-Defined Group, Variable, and Attribute Names](#)
 - [Consider "balanced" chunking for 3-D datasets in grid structures](#)
 - [Consistent Units Attribute Value for Variables Across One Data Collection](#)
 - [Date-Time Information in Granule Filenames](#)
 - [Define the Projection Ellipsoid to Match the Reference Datum](#)
 - [Distinguish clearly between HDF and netCDF packing conventions](#)
 - [Document Missing Granules for Instruments That Acquire Data on a Regular Basis](#)
 - [Ensure Granule's Filename Uniqueness Across Different Dataset Releases](#)
 - [Include Basic CF Attributes](#)
 - [Include Datum Attributes for Data in Grid Structures](#)
 - [Include Georeference Information with Geospatial Coordinates](#)
 - [Include Only One Variable per GeoTIFF File](#)
 - [Include Time Coordinate in Swath Structured Data](#)
 - [Include Time Dimension in Grid Structured Data](#)
 - [Indicate in CRS Metadata the Order of Elements in Horizontal Coordinate Pairs](#)
 - [Keep Coordinate Values in Coordinate Variables](#)
 - [Make a Variable's Valid Data Range Consistent Within Each Product Release](#)
 - [Make a Variable's Valid Data Range Useful](#)
 - [Make HDF5 files netCDF4-Compatible and CF-compliant within Groups](#)
 - [Mapping between ACDD and ISO](#)
 - [Maximize HDF5/netCDF4 interoperability via API accessibility](#)
 - [Not-a-Number \(NaN\) Value](#)
 - [Order Dimensions to Facilitate Readability of Grid Structure Datasets](#)
 - [Standardize File Extensions for HDF5/netCDF Files](#)
 - [Use a Number Outside of the Valid Data Range for a Variable's Fill Value](#)
 - [Use CF Bounds Attributes](#)
 - [Use DOIs for Referencing Documentation](#)
 - [Use Double Precision When Archiving Time in Seconds Since a Specific Epoch](#)
 - [Use Only Officially Supported Compression Filters on NetCDF-4 and NetCDF-4-Compatible HDF5 Data](#)
 - [Use the Units Attribute Only for Variables with Physical Units](#)
 - [Verify CF compliance](#)
 - [When to Employ Packing Attributes](#)

List of Recommendations

Dataset Interoperability Recommendations for Earth Science (RFC-028)

- [Consider "balanced" chunking for 3-D datasets in grid structures](#)
- [Distinguish clearly between HDF and netCDF packing conventions](#)
- [Include Basic CF Attributes](#)
- [Include Datum Attributes for Data in Grid Structures](#)
- [Include Time Dimension in Grid Structured Data](#)
- [Make HDF5 files netCDF4-Compatible and CF-compliant within Groups](#)
- [Mapping between ACDD and ISO](#)
- [Maximize HDF5/netCDF4 interoperability via API accessibility](#)
- [Order Dimensions to Facilitate Readability of Grid Structure Datasets](#)
- [Use CF Bounds Attributes](#)
- [Verify CF compliance](#)
- [When to Employ Packing Attributes](#)

Dataset Interoperability Recommendations for Earth Science: Part 2 (RFC-036)

- [Adopt Semantically Rich Dataset Release Identifiers](#)

- Character Set for User-Defined Group, Variable, and Attribute Names
- Consistent Units Attribute Value for Variables Across One Data Collection
- Date-Time Information in Granule Filenames
- Ensure Granule's Filename Uniqueness Across Different Dataset Releases
- Include Georeference Information with Geospatial Coordinates
- Include Time Coordinate in Swath Structured Data
- Keep Coordinate Values in Coordinate Variables
- Not-a-Number (NaN) Value
- Standardize File Extensions for HDF5/netCDF Files
- Use the Units Attribute Only for Variables with Physical Units
