CMR API search max page_size

Hello,

I have been using following search URL in my API Python scripts to returns list of all GES_DISC collections entry IDs in CMR-UAT for several years now. This list is then used elsewhere for other purposes. However, number of our collections in UAT have surpassed the 2000 maximum limit now and the return list is incomplete. Is there a way around this? Can the max page_size be increased?

https://cmr.uat.earthdata.nasa.gov:443/search/collections.umm-json?provider_id="+providerID+"&pretty=true&page_size=2000

Thank you,

Ed Esfandiari
