

Land, Atmosphere Near real-time Capability for EOS (LANCE)

NASA's Land, Atmosphere Near real-time Capability for EO (Earth Observations) (LANCE) provides data and imagery from Terra, Aqua, Aura, Suomi NPP and GCOM-W1 satellites in less than 3 hours from satellite observation, to meet the needs of the near real-time (NRT) applications community. LANCE is a distributed system that builds on the existing EOSDIS capabilities.

A simplified overview of the data flow from satellite to users.
