

Service Version

Element Description

The edition or version of the service.

Best Practices

The version should be defined in the form x, y, and z. where 'x.y.z' means 'major.minor.incremental' version numbers. Typically, 'x' and 'y' are numbers (0 through 9) and 'z' is a number (0 through 99).

Examples:

- Service Example: 1
- OPeNDAP Service Example: 1.16.1
- SEDAC Hazards mapper example: 1.0.0

Element Specification

Model	Element	Type	Constraints	Required	Cardinality	Notes
UMM-S	Version	String	1-20 characters	Yes	1	

Metadata Validation

All records undergo CMR schema and business rule validation before entering the system.
