

Scope

Overview

The MD_ScopeCode element is used to specify context for the resource the metadata is describing. This context may pertain to the type of complete resource (dataset, service, series, etc), to specific data processing sources and applications utilized to create the complete resource (ancillary data, models, software, etc), to quality report types for assessing aspects of the resource (feature, attribute, sensor etc), and to the frequency of maintenance for a resource (dataset) and/or for the metadata

Recommendations for ISO 19115 and 19115-1

ISO 19115 scope codes are used to provide scope context for complete records, quality reports, and maintenance information. The xpaths to these scope code elements are listed in the table below. ISO 19115-1 adds additional scope code elements for resource lineage and metadata constraints.

| | |

Conceptual Model (UML)

The metadata universe has traditionally been classified into bins for collection level, catalog level, and granule level metadata (or some other similar classification scheme). It is not unusual for each of these levels to require a different approach to metadata and tool development. Many systems have been developed that are focused on a single "level" of documentation.

The ISO 19115 standard changes this picture by including a ScopeCode in each metadata record. This code describes what the metadata actually applies to and it can have many values: attribute, attributeType, collectionHardware, collectionSession, dataset, series, nonGeographicDataset, dimensionGroup, feature, featureType, propertyType, fieldSession, software, service, model, and tile (see Figure).

The name of the scopeCode, hierarchyLevel, implies a hierarchical structure for the metadata. This may not be appropriate in all cases. It is probably beneficial to think more in terms of a traditional scope concept than a hierarchy level in this case.

Note: ISO 19115-1 replaces the hierarchyLevel and hierarchyLevelName elements with the metadataScope element. The grouping of these two elements into metadataScope reduces the ambiguity that occurs when multiple hierarchyLevel and hierarchyLevelName elements exists. The MD_ScopeCode list is also extended with ten additional values.

Implementation (XML) - Metadata Scope

```

<gmd:hierarchyLevel>
<gmd:MD_ScopeCode codeList="http://www.isotc211.org/2005/resources/Codelist/gmxCodelists.xml#MD_ScopeCode"
codeListValue="dataset">dataset</gmd:MD_ScopeCode>
</gmd:hierarchyLevel>
or
<gmd:hierarchyLevel>
<gmd:MD_ScopeCode codeList="http://www.isotc211.org/2005/resources/Codelist/gmxCodelists.xml#MD_ScopeCode"
codeListValue="series">series</gmd:MD_ScopeCode>
</gmd:hierarchyLevel>
or
<gmd:hierarchyLevel>
<gmd:MD_ScopeCode codeList="http://www.isotc211.org/2005/resources/Codelist/gmxCodelists.xml#MD_ScopeCode"
codeListValue="service">service</gmd:MD_ScopeCode>
</gmd:hierarchyLevel>

```

Implementation (XML) - Data Quality Scope

```

<gmd:DQ_DataQuality>
  <gmd:scope>
    <gmd:DQ_Scope>
      <gmd:level>
        <gmd:MD_ScopeCode codeList="codeListLocation#MD_ScopeCode"
          codeListValue="fieldSession">fieldSession</gmd:MD_ScopeCode>
      </gmd:level>
    <gmd:extent>
      <gmd:EX_Extent id="Zambia.boundingGeographicBoundingBox">
        <gmd:description>
          <gco:CharacterString>Zambia.boundingGeographicBoundingBox</gco:CharacterString>
        </gmd:description>
        <gmd:geographicElement>
          <gmd:EX_GeographicBoundingBox>

19115-1 Revisions

| 19115 | 19115-1 | Comments |
|--|---|--|
| //gmd:hierarchyLevel | //mdb:metadataScope/mdb:MD_MetadataScope/mdb:resourceScope/mcc:MD_ScopeCode | ISO 19115 included any number of hierarchyLevels and hierarchyLevelNames. In cases with multiple occurrences of each, it was impossible to associate a given hierarchyLevel with the correct hierarchyLevelName. |
| //gmd:hierarchyLevelName/gco:CharacterString | mdb:metadataScope/mdb:MD_MetadataScope/mdb:name/gco:CharacterString | ISO 19115-1 addresses this ambiguity with the MD_MetadataScope object that unambiguously associates a MD_ScopeCode and the correct name. |
| N/A | //MD_Constraints/mco:constraintApplicationScope/mcc:MD_Scope | ISO 19115-1 adds new element (constraintApplicationScope) in order to allow the description of constraints on a resource that varies in space and/or time and/or level. |
| N/A | //mrl:LI_Lineage/mrl:scope/mcc:MD_Scope | ISO 19115-1 adds an MD_Scope object to LI_Lineage in order to document the type of resource and/or extent to which the lineage information applies. |
| N/A | //mrl:LI_Source/mrl:scope/mcc:MD_Scope | ISO 19115-1 adds an MD_Scope object to LI_Source in order to document the type of resource and/or extent to which the source information applies. |
| N/A | //mrl:LI_ProcessStep/mrl:scope/mcc:MD_Scope | ISO 19115-1 adds an MD_Scope object to LI_ProcessStep in order to document the type of resource and/or extent to which the process step information applies. |

| | | |
|-----|---|---|
| N/A | //mdq:DQ_DataQuality/mdq:report/* /mdq:result/*/mdq:resultScope/mdq: DQ_Scope | ISO 19115-1 adds an DQ_Scope object to document the results scope of a data quality report. |
