

# Error: Including Client-Id header in CORS request

I've just added the Client-Id header to my (working) queries as described in the [CMR API docs](#). When issuing the request from the browser, I get (full URL truncated for brevity):

```
XMLHttpRequest cannot load https://cmr.earthdata.nasa.gov/search/... . Request header field Client-Id is not allowed by Access-Control-Allow-Headers in preflight response.
```

Does the Client-Id header need to be added to the list of allowed headers ([https://developer.mozilla.org/en-US/docs/Web/HTTP/Access\\_control\\_CORS](https://developer.mozilla.org/en-US/docs/Web/HTTP/Access_control_CORS)), or am I doing something wrong?
