How To Pre-authorize an application

In most cases, applications are authorized when you first access them (see What is Application Authorization?). However, some web services are designed to be accessed by command line tools or GUI tools other than web browsers, and in this case you may need to authorize the application before using it. This can be done easily through the Earthdata Login GUI. The first step is to select the 'Applications' tab.

Clicking on the button will present you with the authorization options like an End User License agreement or Custom user attributes for the application. This page only shows up for applications that are configured with a 'EULA' or 'Custom User Attributes'. Please provide the required information and click on the green 'AUTHORIZE' button!
