

# COMET configuration management

## COMET Documentation

- [COMET User Guide](#)
- [COMET FAQ](#)

## Test document

### Converting ESDS-RFC-024 to COMET template.

- [Pre COMET version with conversion annotations](#)
- [COMET version with conversion annotations](#)

## Questions/Observations

1. Can we keep our own numbering scheme or does COMET assign numbers? Do we have to embed the RFC number into the document title?
2. Preface - ESO should develop boilerplate to go here to describe the RFC series, links to ESO pages, etc.
3. Abstract - Should we have a generic ESO paragraph and then add document-specific info into the abstract?
4. Keywords - We should develop a list of ESO keywords that we use for all documents, then some for standards vs tech notes, vs, etc. and finally, keywords that pertain to the document content.
5. Change History Log - Is this just for COMET-style entries or can we put our earlier document history info in here as well?
6. How do we know when we're ready to submit this to COMET?
7. How does the ESO review process interact with the COMET CCB process?
8. What is the minimum set of people and roles we need to get started in COMET. (See the Roles section of the COMET User Guide).
9. Is there someone in particular at COMET that we should work with?
